A **Jupiter123** abc1231 Oct 3

You do have choice Silenus.

Believe in misrepresentations of reality or believe in actual reality.

You choose the former.The wise choose the latter.

SCIENTIFICALLY,the only way an individual can interpret the cosmos in which they reside is if their lifeless physical biological machine body receives and converts varying frequency electromagnetic binary energy waves remitted from vibrating matter,i into a meaningful language which they can see/hear/experience/understand.

All matter vibrates because the attractive and repulsive electromagnetic force interaction absolutes NN,NS,SN,SS that exist between all spinning matter with N and S poles at both the macro and micro levels are balanced out by the formula N/S=N/S.This is how all matter is held together conserving all energy within it and explains how binary data is produced which is contained within the varying frequency electromagnetic energy waves emitted from vibrating matter.

Kiss goodbye to Einstein's failed theories because they were cognitively biased meaningless nonsense.

Energy=Spin Speed of Particles x Frequency of Vibratory Interactions of Particles

You don't cancel out Silenus because NN,NS,SN,SS electromagnetic force interactions don't cancel out.

You need to exist to claim that you don't exist.

Your problem is you don't understand reality science.

Rejecting The Definition Of Existence

Existence is defined as:

> daniel j lavender:
>
> *Existence (n.): Being; that which is perceived, at least in part; that which is interacted with, at least in part, in some way.*

Rejecting the definition of existence results in absurdity.

To reject the definition of existence would be to deny observable, everyday things as existence. To reject the definition of existence would be to deny a tree, water, air or the sensation of touch as existence, as being.

Since denying observable, everyday things is nonsensical rejection of the definition must be irrational. The definition, by necessity, stands.

Any attempt to refute the definition of existence must, by necessity, rely on the very definition it is trying to deny. To challenge or invalidate the definition one must engage in a process that the ontology has already classified as existence.

Defining existence with perception and interaction renders the ontology virtually unassailable because the core axiom is self-validating in every conscious moment.

K **Silenus** Kalikantzaros Oct 6

Existence is dynamic interactivity.
Phenomenon is how this interactivity is interpreted, i.e., perceived.
We only perceive patterns, but existence also includes chaotic energies which life-forms cannot perceive directly, but only through their effect on patterns.
